VeriRAG PDF Fixture - Page 1

This is the first page of a two-page synthetic PDF. It contains only real extractable text so the PDF text path can be verified. The second page additionally embeds a bar chart image, which exercises the figure-captioning path through the DeepSeek vision model.

Retrieval-augmented generation retrieves relevant passages and then conditions the language model's answer on them.

VeriRAG PDF Fixture - Page 2

Below this text is an embedded bar chart. The loader should extract the page text as one Document and the chart as a separate figure_caption Document once the vision model describes it.
